Description			
Earlier this year the C++ Core Guidelines were published by Bjarne Stroustrup and Herb Sutter. From the abstract:			
This document is a set of guidelines for using C++ well. The aim of this document is to help people to use modern C++ effectively. By "modern C++" we mean C++11 and C++14 (and soon C++17). In other words, what would you like your code to look like in 5 years' time, given that you can start now? In 10 years' time?			
I think it would be nice to have a talk/discussion about this.
